The Conservation Pledge

I pledge to protect and preserve the natural resources of the planet Earth, and promise to promote education so we may become caretakers of our air, water, land, forest, and wildlife.

Joy Is More Powerful Than Fear

“Imagination is greater than willpower.”

--Albert Einstein

When the Climate gets tough, the tough get *environmental*, and ask, “*At what expense is the Collapse of Civilization*”! How about seizing the moral high ground. What if you pretended there were already a ban on *fertilizers* made directly, or indirectly, from petroleum sources or with fracked materials.

Signs of the Times

For 20-years MONSANTO sold USA farmers seeds with *Genetically Modified Organisms* (GMOs) such as spliced-in traits from foreign organisms so that the crops self-produce pesticides to kill bugs.

If you saw the documentary film GMO: OMG then you may recall that these crops are classified as *Biological Pesticides*. They are not even classified as “*Plants*”. We’re talking about the GMO ingredients in the *Human Food* in your *Supermarkets*, in *Animal Feed*, and in your car’s *Ethanol*. How do you like being treated like a pest?

Biological Pesticide annual sales are about TWO BILLION DOLLARS.

You might wonder if all those *Biological Pesticide* food sales are profit at the expense of *your* gut. Would you agree with advocacy groups, consumers, and organic farmers that there needs to be closer regulatory scrutiny!

Who knows how much toxic pesticide residue is in the food on your plate because *Food Produced by Genetic Engineering* is so bizarre it can’t even grow without *also* being sprayed topically. Global sales of *Chemical Sprays* are about FIFTY-FOUR BILLION DOLLARS. Who profits? Certainly *not* the environment or human health!

Corporate back-end sales of *chemical* fertilizers, herbicides, insecticides and seed coatings may please Master Marketer Jay Abraham, but not *Great Mother EARTH*. If none of this stuff could be patented, there would be no profit in doing it.

.....

January 18, 2015

Page 2

No matter how much *Herbicide* and *Pesticide* is made by BAYER AG, BASF SE, DOW, DUPONT, MONSANTO, and SYNGENTA the *Biological Pesticide* crops are still accosted by Nature's *Super Bugs* and *Super Weeds*.

Great Mother EARTH has billions of years of experience on her side. Man is relatively new on this Planet, and our prideful *Science and Technology* is dispensable from *Gaia's* point of view. The *Sun* seems to agree with her. She has the *Wisdom of the Ages* on her side.

Nature's derision gets the last laugh, so why do it? Ultimately the preferred agricultural model will be local and organic because the benefits and rewards of living in harmony with *Higher Intelligence* far exceeds degenerate quests.

The Export Market

Organically-grown products have the appeal as export crops to foreign countries with GMO restrictions already in place. The coveted *USDA Certified Organic Seal* allows the use of bacteria that is *naturally* occurring on organic crops. Here's the rub, the giant *Chemical Industry* lusts after *Seed Monopoly* so MONSANTO and their rivals are frantically scrambling to diversify beyond chemicals!

GERMANY's BASF paid \$1 billion to buy *Becker Underwood*, an IOWA firm specializing in biologically-based pesticides.

BAYER paid \$500 million for a similar business called *AgraQuest Inc.* Research and Development Director *Vande Berg*, with BAYER *CropScience* is hunting for bacterial organisms and fungi in the soil, in order to replace chemicals. His aim is to find beneficial microbes with which to coat the outside of their seeds, and to spray on their crops.

DUPONT paid \$6.5 billion for *Danisco A/S* and is building two new research facilities in AMERICA. *Paul Schickler*, President of DUPONT's seed unit hopes microbe-based products may replace synthetic chemicals.

MONSANTO paid \$300 million to the DANISH firm *Novozymes A/S* in order to be able to use *Novozyme* technology and sell microorganisms. MONSANTO's Chief Technology Officer, *Robert Fraley*, wants to develop *new* microorganisms.

BASF SE, BAYER, DOW, DUPONT, MONSANTO, and SYNGENTA are racing against one another to find "*Organic Pesticides*". But it is *dysfunctional* for seeds to be *co-dependent* upon patents by oligarchical *Seed Monopolies*. Nature never evolved that way.

The beauty of *Organic Farms* is that they have none "*need*" for man-made *Organic Pesticides* because they do "*Organic Practices*" that are self-sustaining. A tablespoon of soil typically has about 50-billion microbes already.

Composting and other organic methodology builds the topsoil and encourages *Nature's* symbiotic relationship between Flora and Pollinators. Little children the world over

January 18, 2015

Page 3

charmingly love the *Fairy Insect Society*. Using Pesticides to kill the *Fairy Bugs* is a perversion. MONSANTO should listen up to the rebuke *Jesus* gave, “*Become as little children*”.

Senior Scientist *Margaret Reeves*, with the *Pesticide Action Network*, warns that sales of microbe-products is still an unsustainable approach. Spreading *new* microorganisms in mass all across farm fields could yield problems. **If bacterial resistance is developed then even more pesticide use would be required.**

Global Geoengineering Governance

A *Global Geoengineering Governance* agreement has been signed between the *United Kingdom* (UK) and the *United States of America* (USA). Those who control the printing presses can print whatever money they want, to pay for whatever they want.

The atmosphere has been used by the **Military** as a physics lab for worldwide *Atmospheric Laboratory Experiments* dating back before *Global Warming*, to the 1960’s. What are they saving themselves from?

“*Persistent Jet Contrails*” is a misnomer from the late 1980’s.

It is important to avoid using the public slang word, “*Chemtrails*” when you make an internet search, because it will just bring up *Wikipedia* where Skeptic bloggers post their arrogant comments.

Instead, use the correct terminology and go to the go to the **NASA Corporation** website, and start typing in the words: “*Atmospheric Aerial Spraying, Atmospheric Technology Experiments, Bio-Weaponry, Climate Engineering, Climate Remediation, Covert Warfare, Electromagnetic Scalar Technologies, Geoengineering, Geoengineered Weather, Solar Obstruction, Solar Radiation Management, Stratospheric Aerosol Engineering, Weather Control, Weather Modification, or Weather Remediation*”.

Chemicals, particles, gasses, and salt are being sprayed by unmanned drones, jets, small planes, and rockets. This was all done without your consent or knowledge.

How do you like being sprayed like a bug?

We used to have blue skies with big, puffy white clouds. Now there is man-made white haze and soon you may not be allowed to see the sun at all.

How do you like your skies, natural or man-made?

January 18, 2015

Page 4

You might want to be aware that more is being disrupted than the weather. The nano-particulates don't stay up in the air. *Heavy Metal Toxicity* settles on the soil, making it difficult to grow food. The *Nano-Particulates* land on crops. They fall from the sky into the water supply. They may even land on you, and be absorbed through your skin. They float down into the air you breathe, and you breathe them into your lungs.

Look Up! When you see *Global Geoengineering Governance* in the sky, take pictures! Get the *Skyder Alert App* to send your pictures to lawmakers to let them know the locations where it is occurring. See <http://www.skyderalert.com>. But hurry! Lung cancer is no joke.

To learn more, request educational literature, or to obtain *Geoengineering* documentaries visit <http://www.GeoengineeringWatch.org> www.WhyInTheWorldAreTheySpraying.com.

Toxins in OREGON Skies

Dear Readers, several months ago the *Eco-Community Dialogues Newsletter* informed you that, according to our local Newspaper, OREGON had been chosen by agency of the *Federal Government* to be one of only six-states where *Unmanned Aerial Drone Pesticide spraying* would soon be underway as a pilot program.

The problem is that our state laws and regulations favor the *Timber Industry's* profits as does OREGON Senator Ron Wyden. Have our political leaders been corrupted by money and power?

When helicopters spray 800,000 pounds of *herbicides* it comes with risk of wind drift. Spraying clear cuts with oil causes oil to get into streams and waterways. Factor in *Unmanned Drones* doing *Aerial Spraying of Pesticides* overhead. Is that what OREGON's *Physician Governor* wants.

Spraying is seen as a **hazardous activity** in neighboring states. IDAHO won't allow aerial spraying within half a mile of cities, and WASHINGTON requires a wide no-spray zone around nearby homes. WASHINGTON disallows any spraying when the wind speed is above seven miles per hour.

Are you aware that residential properties in the state of OREGON haven't any buffer at all from *Aerial Chemical Spraying*. Eventually the *Western Environmental Law Center* might get involved over the *OREGON Department of Environmental Quality's* incompetence.

In the meantime you may contact **BEYOND TOXINS**, an advocacy group based in Eugene, OREGON. It is lobbying for tighter environmental and human health laws and regulations because the *Beaver State* needs higher standards against *Aerial Chemical Spraying*.

The OREGON *Public Health Department* may have to connect-the-dots if enough people report adverse physical or traumatic mental affects such as *Dizziness, Coughs, Gastric-Intestinal Irritation, Skin Rashes, Impaired Vision, and Weakness*.

It is called a “*Trigger warning*” when a topic under discussion triggers adverse physical affects in people, or traumatic mental affects in people. What is it going to take to *trigger you* to feel motivated to speak out!

(Source: October 26, 2014, Local News, “*Spraying hits few red lights across Oregon*”)

CALIFORNIA Has Gone Draconian

Only *one* opportunity was given to the public to voice concerns about CALIFORNIA’S STATEWIDE PLANT PEST PREVENTION MANAGEMENT’S “***Programmatic Environmental Impact Report***” (***PEIR***).

The *California Department of Food and Agriculture* published the draft of its environmental plan. The agency intends to give itself state-wide authority to spray toxic pesticides anywhere in the state, at any time, into the indefinite future.

According to the draft plan, the state’s agency will have the right to approve new pesticides and other expansions of spray programs *without* analysis of the environmental and human health impacts in specific locations to be sprayed, and *without* public notice or review.

Absolute power corrupts absolutely! But stop now. Shouldn’t the toxic legacy be minimized, instead. The unspoken warrant in the draft plan is that the citizenry is an adversary category. This is a *Human Rights* issue because it means your perceptions shall be managed by the state! Who is in control of your mind. Does the state want to take away your mind power. Think about the implications of this draft plan.

Nan Wishner of the CALIFORNIA ENVIRONMENTAL HEALTH INITIATIVE (CEHI) is aghast because a recent study of the state agency’s own data shows that the agency’s own fruit fly treatment failed. *Yet the agency wants to continue to spray first, ask questions later.*

Jonathan Evans of the CENTER FOR BIOLOGICAL DIVERSITY is appalled that CALIFORNIA’s most threatened wildlife will be poisoned. Who profits from a *Pesticide-Poisoned Planet*.

Caroline Cox, Research Director for the CENTER FOR ENVIRONMENTAL HEALTH is shocked at the unsustainable toxic treadmill for the state to do repeated chemical treatments on food and in neighborhoods. She warns that tiny amounts of pesticides can cause serious health risks such as *Asthma, Cancer, and IQ Loss in children*. Is that what the government wants.

Attorney *Elizabeth Forsyth* of EARTHJUSTICE and Attorney *Jason Flanders* of AQUA TERRA AERIS LAW GROUP are horrified, especially about the risk to drinking water and streams.

January 18, 2015

Page 6

Debbie Friedman, the founder of MOMS ADVOCATING SUSTAINABILITY (MOMAS) distressed over how this sets an ominous precedent for unchecked power by the agency, and aerial pesticide spraying in populated areas is poor judgment.

According to *Ronnie Cummings* International Director of the ORGANIC CONSUMERS ASSOCIATION, the plan jeopardizes organic farmers who could be made to spray as part of the state's treatment programs. Forcing organic crops to become conventional undermines consumer trust in *USDA Certified Organic* food.

Your Newsletter of Choice

Eco-Community Dialogues newsletters are a FREE community service, available by request, at the *A Street Print & Parcel* across from ACE hardware, in Ashland, OREGON. The print shop only charges for paper and ink, or will download the entire PDF file of current and back issues onto people's zip drives to read off their computers and save paper and ink. It's up to you to provide your own zip drive. The entire archive of past issues can be downloaded onto a zip drive if you take yours over to the *Print Shop*. Then you can print it out to read on your own printer.

Fair Use Notice: The *Eco-Community Dialogues* newsletters are intended for educational and informational purposes only.
